

## **PROJECT MANAGER**

State College engineering firm seeks full time project manager. Prefer professional engineer, but will consider engineer in training or graduate engineer with multiple years of experience designing HVAC, plumbing, life safety and electrical systems for buildings.

Projects involve multiple building types, including new construction, renovations, additions, studies, energy audits, system trouble shooting, etc. Many are LEED, solar, Passive House or other environmentally friendly projects. Project responsibilities include plans, specifications, and calculations as well as supervising draftspersons performing the same.

Typical clientele includes architects, federal, state, and local government, private developers, institutional and corporate entities. There is never a dull moment. Projects require an open mind and good engineering judgement, because typically, each project is something new, exciting, and challenging. There is very little repetition.

Familiarity with Revit, AutoCAD, Excel, Word or similar software required.

Negotiable salary and benefits commensurate with experience.
